7.17 Choreomusic

Learning goals

Students

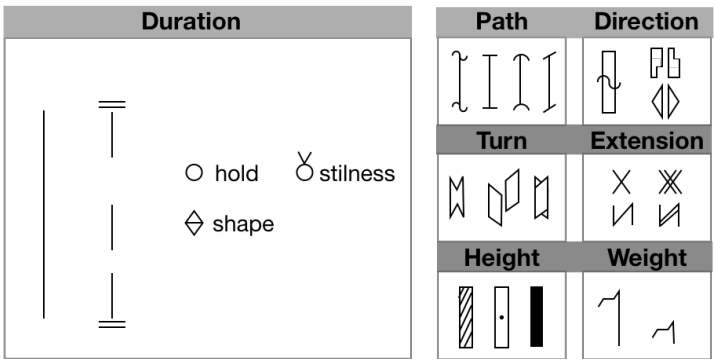

- Conceive music and movement as an integrated whole
- Makes intentional choices about the relationship between music and movement.
- Recognises that music and movement can be meaningfully connected in multiple ways.
-

Requirements

· An overview of symbols that describe possible movements (see appendix).
· Paper
· Pencils/crayons in different colors

Inspiration

Laban motif notation (Hutchinson Guest, 2007). This system for notating movement is based on a sequence or 'sequence' of movement motifs or actions.
Students can devise their own system for notating music.

Some symbols used to indicate different aspects of a movement.

Tip: Make it clear to students that they can also use their own symbols for the movements. More important than the 'correct' use of Laban notation is that they approach movement creatively.

Constraints

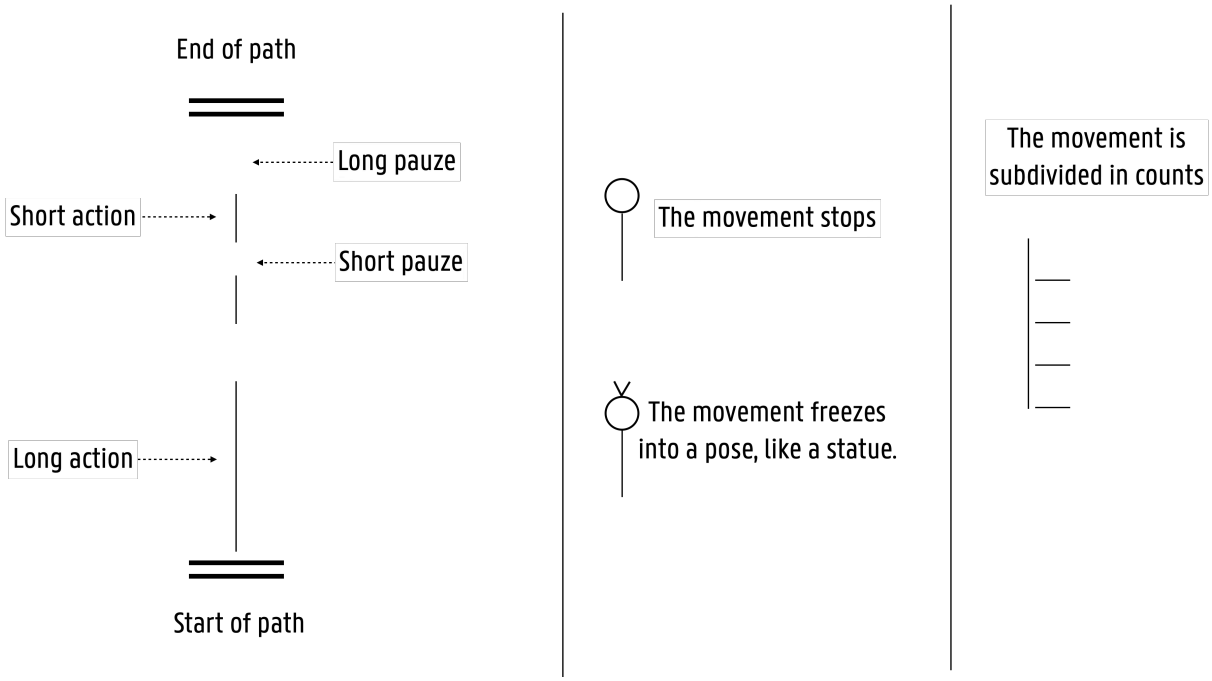

Description

In this activity, students create a kinemusical musical performance in which they creatively explore the connection between music and movement. Using Laban's motif notation system, they record their performance on paper.
Students first receive an explanation of the notation system, using an example. Afterwards, they get to work themselves. They think about which movements they are going to do and which music they are going to play. In this way, each student creates their own choreography with music and movement. After some time (e.g., 15 minutes), students perform their creations for each other.

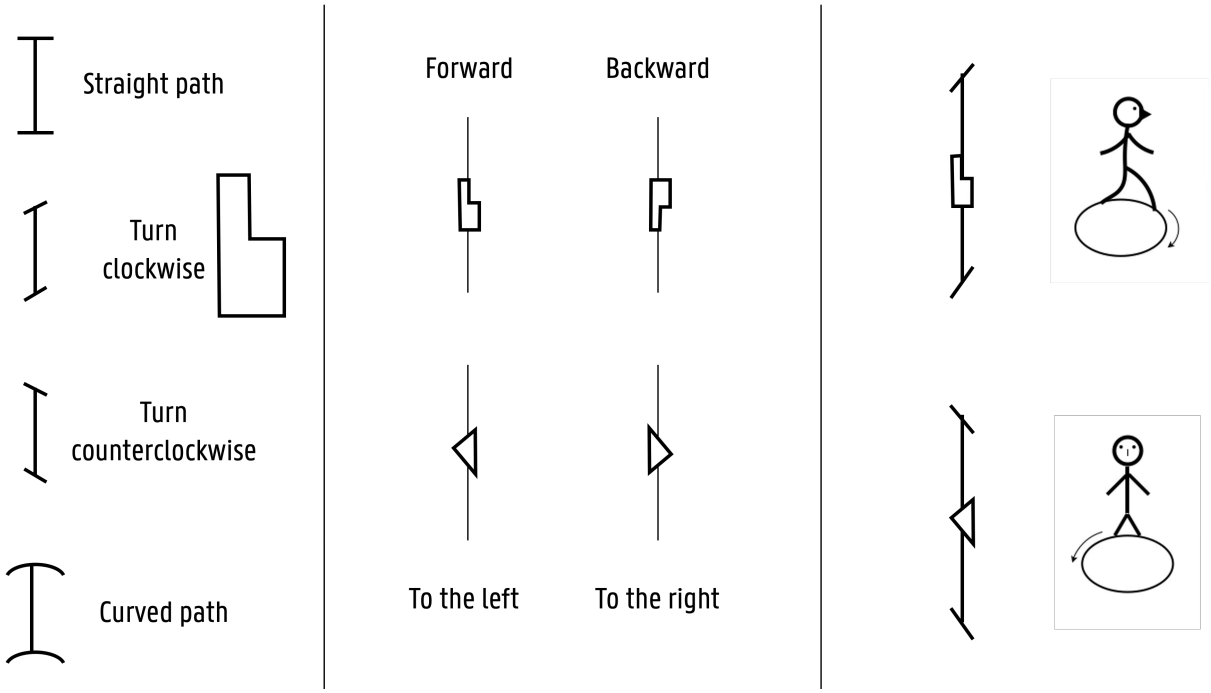

Variations

- Students create a choreography (fixed combination of movements), but improvise the music.
- Students use an existing melody/composition, come up with movements that fit it, and write them down in a kinemusical score.
- Students create a kinemusical performance together (e.g., in duos, trios, etc.).
- Students create an individual kinemusical performance, but exchange their 'scores', practice these scores, and then perform them again for each other.
- Students create a combination of movements together, but each find their own music to accompany the movement. They then play together.
- Increase the complexity of the exercise by:
    - Use more symbols.

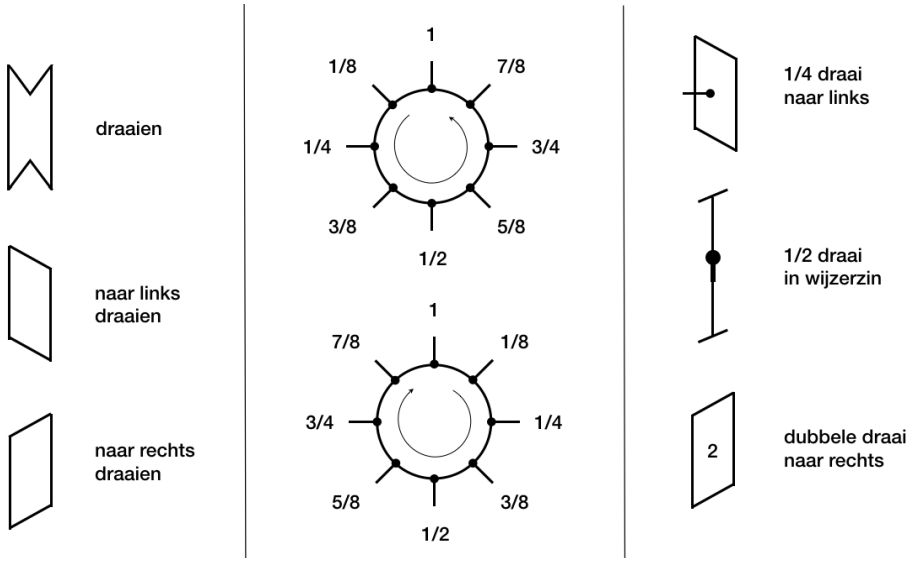

- Increase the number of "actions."
- Start with a limited number of notes, move on to pentatonic scales, and then to a specific tonality.

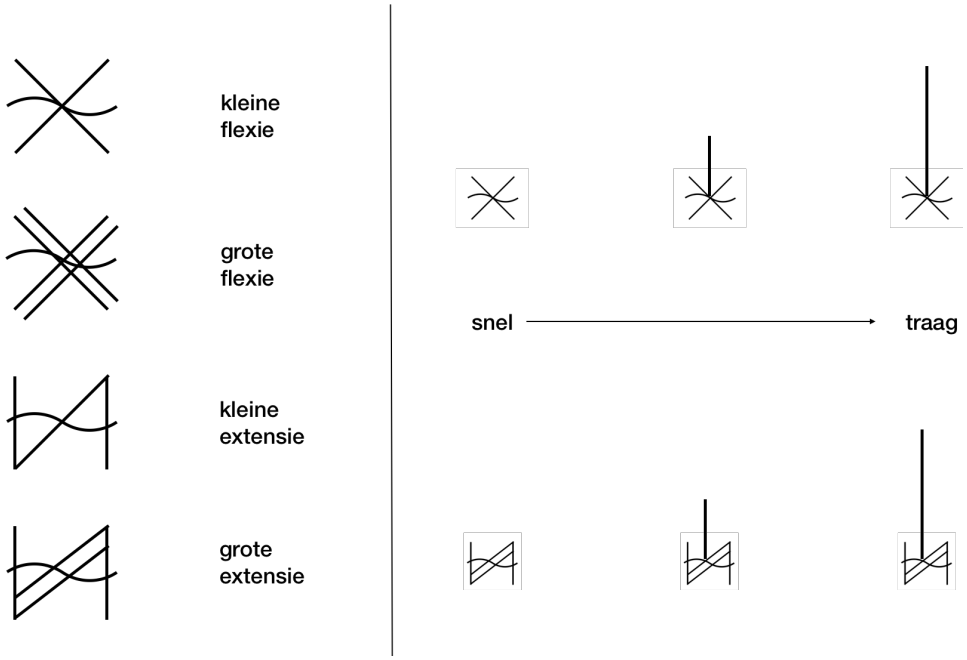

A vertical representation of a choreography (left) and some indications to determine the duration of an action.

Different ways of indicating the direction of a movement.

Different ways of indicating a turning movement.

* flexion = inwards – extension = outwards

(asterisken toevoegen in figuur)

Different ways to indicate making body and body movement smaller or larger.
